

AVIATOR 300

No Limits in the Sky

More Bandwidth and Coverage for Smaller Airframes

Offering affordable high speed data in your aircraft, the traditional obstacles of large antennas, multiple LRUs and expensive installation costs are no longer valid. The AVIATOR 300 is small in size and light in weight making it possible to offer a complete broadband solution at a low cost, even for small and mid-sized aircraft.

Full featured office-in-the-sky

Although compact, the AVIATOR 300 is a complete solution for both voice and data, with a wide array of built-in features. With the system onboard you can make phone calls, connect your Smartphone, log-on to your corporate network, e-mail, surf the Internet, or send a fax while traveling from place to place in your aircraft.

Flexible modes of operation

AVIATOR 300 can operate in different data modes depending on the user's requirements. You can choose Quality of Service (QoS), which ensures guaranteed bandwidth in steps and you pay per minute, or the always-on background connection where you only pay for the amount of data you transfer.

Superior voice

The AVIATOR 300 provides a single solution for simultaneous global voice and high speed data. With AVIATOR 300 the quality of voice communication is better than ever and the price is also greatly reduced.

High speed data up to 332 kbps

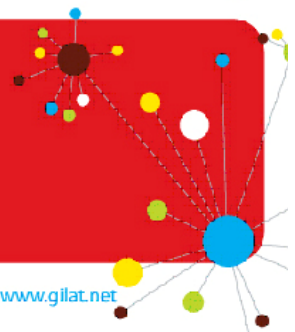

To comply with installations on smaller aircraft, the AVIATOR 300 system uses an Intermediate Gain Antenna (IGA).

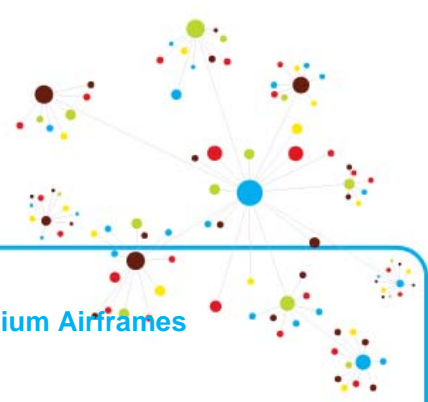

This ensures a lightweight package with low profile/drag and small antenna footprint on the fuselage, typically less than one-third that of a high gain antenna, making it suitable for use on light aircrafts. The IGA installation provides full SwiftBroadband capabilities with data speeds up to 332 kbps.

Upgrade from Aero-M and Aero-I

The AVIATOR 300 is the perfect upgrade path for legacy Aero-M and Aero-I installations. When upgrading these systems to AVIATOR 300, the TT-5006A antenna installation can be reused, making the upgrade simple and cost effective.

Space for everyone

AVIATOR 300– Enhanced Bandwidth& Coverage for Small to Medium Airframes

- Data rates up to 332 kpbs
- High quality, low cost voice
- Multi-user capability
- Built-in router
- Wireless functionality
- Supports WiFi handheld devices

AVIATOR 300 High Speed Broadband Communication

- World Wide Web – Surf the internet as you would at the office or home
- E-mail – Reading e-mail and downloading attachments is swift and easy
- Phone – Make quality phone calls at a low cost using either wired or wireless handsets
- Fax – Send and receive faxes
- Corporate LAN – Log-on to your corporate network from anywhere in the world
- Data – With rates up to 332 kbps, use our laptop or WiFi handheld device to stay connected
