

Domestic Services

Private Networks

Space for everyone

Providing a secure, broadband internet connection to every branch in your organization is essential to running a successful business. In many cases, however, terrestrial infrastructure is available only in central locations and fails to reach your organization's remote branches.

Gilat Satcom Private Network services provide cost-effective solutions for enterprises, NGOs and government institutions through extensive satellite communication platforms offering C-band and KU-band coverage. You can select to operate your own hub or use our managed hub, which is operated by our team of experts.

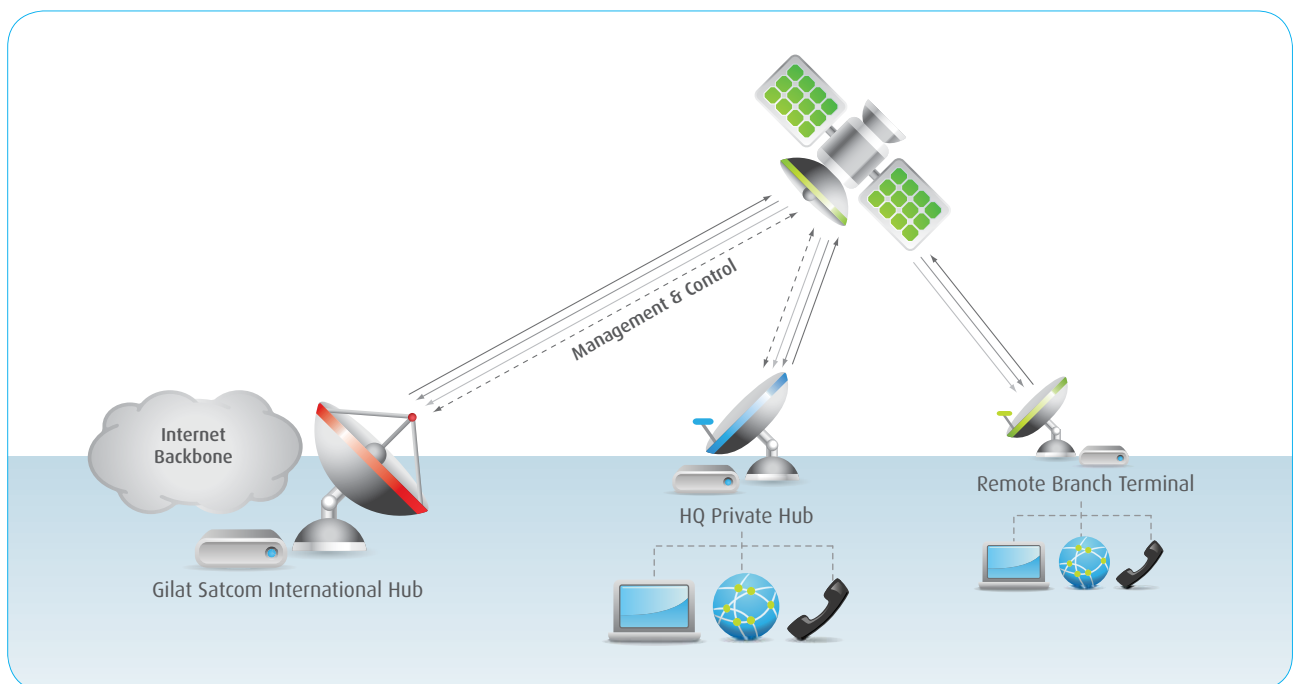

Gilat Satcom Private Network services are tailored to your needs with flexible constellation options including star, multi-star and full mesh. You may choose to tunnel unsecured public internet traffic directly to the internet backbone from the remote site, or to tunnel all traffic to the headquarters' location.

Gilat Satcom communication platforms provide a great user experience with low round-trip delay for all services including voice and data. With advanced Quality of Service (QoS) management, you can maximize your link utilizations without affecting performance. The latest DVB-S2 ACM and Adaptive Inbound channel technologies along with our comprehensive Service Level Agreement (SLA) ensure proper delivery of the most demanding applications.

Gilat Satcom professional team has the expertise and vast field experience required to take your project from concept to completion. We offer turn-key projects including design, planning, implementation, operation and on-going support. Equipped with the latest technologies, our Customer Services Center (CSC) operates 24x7x365 providing effective, and reliable support to our valued customers.

BENEFITS

- Tailored solutions according to your needs
- Reduced operational expenses (OPEX)
- Extensive satellite coverage in C-Band & Ku-Band
- Turn-key projects and managed services
